Work Experience

Freelancing (June 2015 – Present)

Backend Developer & Automation Engineer

- Developed scalable backend and SaaS applications for over 10 years using Ruby on Rails, Laravel & CodeIgniter.
- Built and maintained large-scale web scraping systems using Scrapy, Playwright, Selenium incorporating product monitoring, proxy rotation, anti-bot measures, and automated booking functionalities.
- Integrated CRMs, payment gateways, accounting platforms, communication tools, and third-party APIs, including GoHighLevel, Sierra, RealGeeks, Lofty, Stripe, PayPal, Xero, and QuickBooks, while building webhook-driven workflows, subscriptions, billing, and business automation.

Aldaim Solutions (August 2012 – May 2015)

Software Engineer

- Worked as a Software Engineer developing web applications and backend systems.
- Participated in the design, development, debugging, and maintenance of business applications and automation solutions.
- Progressed from an internship role into a full-time Software Engineer position at Aldaim Solutions.

Projects

ReviewScraperAPI – Review Data Aggregation & Scraping API

- Developed a scalable API-based platform for collecting and normalizing customer reviews from platforms such as Facebook, Google, and Tripadvisor.
- Implemented API access, background processing, subscription and pay-as-you-go billing, and structured review data delivery for client applications.
- Created automated scraping workflows incorporating proxy rotation, anti-bot measures, and rate-limit management to enhance reliability across diverse sources.

LeadCodes – Lead Enrichment & CRM Automation SaaS

- Developed a SaaS lead-enrichment platform, integrating multiple third-party APIs and CRMs including Sierra, RealGeeks, Lofty, and GoHighLevel.
- Developed automated workflows to enrich leads with phone numbers, homeownership status, residence history, financial information, and additional attributes.
- Implemented subscription management, credit-based billing, webhooks, API integrations, and background processing to automate the lead enrichment workflow.

Spooph – Short-Form Video & Creator Platform

- Developed a video platform where users can upload, watch, like, share, and interact with short-form videos.

- Implemented video-specific chat and commenting features, including comments, upvotes/downvotes, and social interactions.
- Integrated Stripe payments, allowing users to pledge financial support directly to content creators.

RU-N – Team & Event Management System

- Developed a team and event management platform with event scheduling, RSVP tracking, team management, and match score history.
- Built dashboards for upcoming events and team members, along with event availability tracking.
- Implemented individual and group chat between coaches and players, integrated with Twilio for SMS/mobile communication.

Cumulus-Me – Social & Professional Network Analysis

- Developed a platform that analyzed contacts from Facebook, LinkedIn, and Google+ based on education, profession, location, and other social/professional attributes.
- Matched contacts based on shared schools, colleges, professions, and career areas to identify relevant connections.
- Developed a scoring system to rank contacts based on their potential social and professional networking value.

PiraniProof – Design Proofing & Workflow Management

- Developed an internal CMS and workflow management system for customer design jobs, including request forms, job statuses, fuzzy search, and drag-and-drop workflow trays.
- Built an automated design proofing workflow where customers receive a secure link via email to review, approve, or reject designs.
- Automated job routing and notifications, moving jobs to the appropriate workflow tray based on customer approval or rejection.

Support CustomTunez – Customer Support & Task Management

- Developed a support platform where customers can create support tickets, communicate with admins, and track issues and resolutions.
- Integrated Wix, allowing Wix customers to log in directly and automatically creating related tasks in the Wix system.
- Implemented SMS and Slack notifications along with automated task and support workflows to keep customers and internal teams updated.

AftiePlayer – Image Comparison & Visual Diff Tool

- Developed a reusable JavaScript-based visual diff tool with an interactive slider to compare before-and-after versions of two same-dimension images.

Crewcade – Gaming Team & Tournament Platform

- Developed a platform for players to create, join, and manage gaming teams, with team pages, player profiles, and sponsor advertising.
- Built a tournament bracket system to manage matchups, track game results, handle progression through tournament stages, and determine winners.

Zaflogistics – Logistics & Delivery Management

- Developed the Laravel-based web backend and admin dashboard for managing orders and delivery requests submitted through the mobile application.
- Built an admin interface to view and track active deliveries, including shipments handled by third-party carriers such as UPS and FedEx.

TrackMyLinks – Backlink Monitoring & SEO Analysis Platform

- Developed a platform to analyze backlinks from campaign and competitor pages by automatically extracting external links.
- Implemented backlink monitoring and indexing-status tracking, with automated checks for link health and Google indexing signals.
- Built daily reports and alerts to track backlink changes, link health, HTTP status codes, and indexing status.

CellTrack — Phone Tracking & Network Analysis Platform

- Built a web application for mobile-number tracking, providing detailed subscriber and network information with alerts when a mobile number changes location.
- Included HLR status, subscriber connectivity, roaming, number portability, network details, and country analysis.

DomainHawk – Domain Auction & Auto-Bidding Platform

- Developed a domain auction platform aggregating listings from DropCatch, Dynadot, NameCheap, NameSilo, and Sav, allowing users to search and manage auctions from a single interface.
- Implemented automated bidding, where users set starting and maximum bid limits; scheduled jobs monitor auction status and automatically increase bids when outbid without exceeding the configured maximum.
- Integrated WHOIS services to monitor users' domains, including expiration and renewal tracking.

eCommerce Scraping & Product Automation

- Developed and maintained Scrapy spiders for 50+ eCommerce websites, including Armani, Cubus, Amazon, Scotch & Soda, Namshi, Talabat, and EatEasy.
- Built product scraping pipelines to clean and normalize data, handle proxies, monitor scraper health with Rollbar and daily reporting, and push selected products to Shopify via API.

Education

- Postgraduate Diploma in Computer Science (September 2019 – February 2021)
University of Engineering and Technology, Lahore
- BS Computer Engineering (September 2009 – February 2014)
University of Engineering and Technology, Lahore

Technical Skills

- **Backend:** Laravel, Ruby on Rails, CodeIgniter, Django, FastAPI
- **Programming:** PHP, Ruby, Python, JavaScript, C#
- **Databases:** MySQL, PostgreSQL, MongoDB, Elasticsearch
- **Scraping & Automation:** Scrapy, Playwright, Selenium
- **Cloud:** AWS (EC2, S3, Lambda), GCP, DigitalOcean, Heroku
- **CRM & Accounting:** GoHighLevel, Sierra, RealGeeks, Lofty, QuickBooks, Xero, Sage
- **APIs & Integrations:** REST APIs, Webhooks, OAuth, Third-party APIs
